

## Creating confidence

### BUILDING A SECURE FUTURE

---

#### Key benefits

- Confidence in the future because your information and services are safe
- Growth from new channels as we take care of your risks
- Protection from criminal attacks for your staff, customers and shareholders
- Return on investment from systems that save time, money and manpower
- Compliance with industry, data protection and privacy laws

#### THE CHALLENGE

---

Today, securing your business information is as important as protecting your property. Maybe more. Your customers, partners and staff need to know their information is safe with you. And you need protecting from criminal behaviour and inadvertent but risky actions.

The right security gives you confidence against any threat to your business. Particularly in today's electronic society.

#### OUR ANSWER

---

##### Protect your knowledge

With a secure operation, no one can spy on, sabotage or steal your ideas or sensitive information. We'll work with your people and processes and innovatively use technology to create an agile, secure, compliant business for you.

##### Protect your people

We use clever approaches to ease your workload and highlight only the important things. So you can work more efficiently and get better results with fewer resources. Making sure vital services run without disruption from vandalism or other crime. And keeping people safe.

##### Protect your name

The law demands that you keep people's information safe. We can work with you to protect their information, and give them confidence: Logica is a name people know and trust.

##### Protect your future

Confidence through security is at the core of a 21st century organisation. We can advise, design, build and operate the right secure environment for you. Add to your current systems, design new ones, build mobile apps, in the cloud. Do your security design, testing, operations. Whatever is right for you. We'll take care of it all, so you don't need to worry.

##### Protect your profits

Everyone wants access to your information. Wherever they are. Partners, suppliers, customers, citizens. In the real world and online. We can make sure only the right people have access and at the right cost. A unified access system protecting your whole organisation, even after mergers or acquisitions. And your partners and customers too.

##### Confidence through security

There are two key ways we can help you protect your information, your assets and the public.

### Securing your organisation

Every part of your business should be secure. We can help you control who has access to which information, systems and areas. And teach your team about risks, using the right processes and complying with the latest laws. We'll also give you tools to avoid data loss, helping you create new secure customer opportunities. Working securely with global partners. In the cloud, mobile or off-shore.

### Safeguarding your people and assets

We'll help you protect people and minimise losses due to fraud. Making sure vital services, like energy and telecoms, run without disruption from physical or electronic crime. Quickly identifying and mitigating threats from outside – or inside – your business. Stopping criminal behaviour. Saving money. Building confidence.

### Pick and mix

What do you need? A completely new system, from scratch? One that makes your existing systems secure? Or our expert consultancy, or managed services?

It's your choice. But we can work with you to work out what you need. We'll look at your business objectives, risks, policies and standards. Then we'll recommend, design, build, integrate and run what you need. Securing your future.

## WHY WORK WITH LOGICA?

---

We're recognised as experts in security, and have been for over 40 years. Protecting businesses like La Française des Jeux, BMW Group and Fronter from criminal behaviour and inadvertent but risky actions. Real or virtual, the world over. Building new, secure channels to customers. Working closely with partners, wherever they are. In the cloud, mobile or off-shore.

We're also particularly proud to have worked with so many public sector departments across the world. For all of them, it's crucial to maintain the trust and confidence of the public. We've helped governments from The Netherlands to Australia with everything from education to homeland security. Building a secure future for us all.
